PRECISION GANG MILLING ARBOR BUSHINGS

TYPICAL GANG MILLING ARBOR BUSHING

BENEFITS

- ELIMINATES CHATTER AND VIBRATION
- HIGH LOAD CARRYING CAPABILITIES
- HELPS DAMPEN AND EVENLY DISTRIBUTES CUTTING FORCES
- ELIMINATES EXCESSIVE MOUNTING CLEARANCES

FEATURES

- COMPACT DESIGN TO FIT WITHIN TIGHT SPACE CONSTRAINTS
- SEALED AGAINST CONTAMINATION
- STANDARD SIZES AVAILABLE TO FIT YOUR APPLICATION
- CARTRIDGE DESIGN FOR EASY INSTALLATION

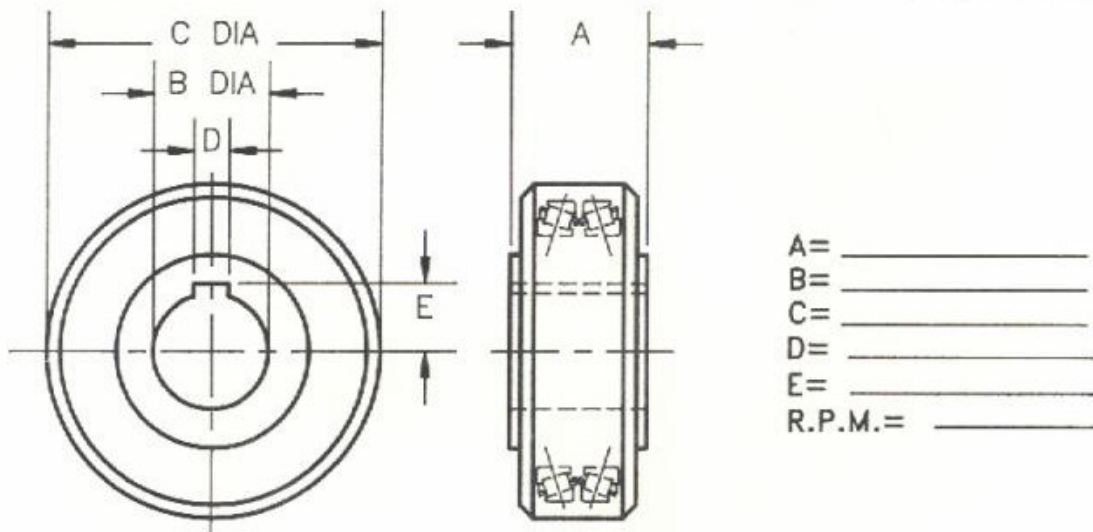

■ CALL OR FAX WITH YOUR DIMENSIONAL REQUIREMENTS ■

Gatco's gang milling arbor bushings (also known as "Pancake Bushings" because of their compact design) are used for milling applications where space is limited and cataloged bushings will not fit. A typical application would be to mill engine block bulkheads. They are superior to bearings which are commonly designed on arbors based strictly on size consideration alone. Gang milling arbor bushings are designed specifically to provide maximum load carrying capacity while fitting within the limited space normally allowed for in these operations; particularly the width limitation. Further, they eliminate the need for spacers and additional parts because they mount directly on the arbor and when their overall length is held can act as a spacer. Contact Gatco for gang milling arbor sizes or fill in the Fax page above and send to us for immediate design evaluation.
